

Spherica Thrust Roller Bearings

TBC Thrust ball Bearings supply high quality Thrust Bearings in China, Bearing design choices for thrust bearings include flat race thrust ball, grooved race thrust ball, two directional grooved thrust, needle roller thrust, cylindrical roller thrust, spherical roller thrust, and slewing ring or turntable bearing. Flat-race thrust bearings consist of a ball retainer held between two flat washers. Grooved race thrust bearings consist of a ball retainer held between two grooved washers. Two directional grooved thrust bearings are 'back-to-back' grooved race thrust bearings. Needle roller thrust bearings consist of a needle roller and cage assembly. Cylindrical roller thrust bearings consist of a roller and cage assembly. Spherical roller thrust bearings have a spherical raceway in the outer ring. Slewing ring or turntable bearings can accommodate axial, radial and moment loads.
